ABSTRACT

The invention includes catalysts for polymerization of olefins, comprising (A) a transition metal compound, (B) an oxygen-containing compound, or a compound capable of reacting with a transition metal compound to form an ionic complex, (C) specific compound such as a reaction product triphenylmethyl alcohol and triisobutylaluminium, optionally (D) an alkylating agent, and methods for producing olefinic polymers in the presence of such catalysts. catalysts have the advantages of enhancing the polymerization activity and reducing the amount of the promoter such as oxygen-containing compounds, etc. Using them, olefinic polymers can be produced efficiently and inexpensively.
